

ETHOX 4804

ADDITIVE FOR IMPROVING HEAP LEACHING

Ethox 4804 is proprietary blend intended to be used in the heap leaching process of mining for gold or copper. It can be applied with the leachate solution without interfering with the leaching chemistry. Ethox 4804 acts both as a penetrating agent designed to improve percolation rates and accessibility as well as reducing the negative effect of clay swelling and exfoliation which can plug percolation channels in the heap. Ethox 4804 increases production rates, flow rates, and recovery. The recommended starting usage rate is 1000 ppm.

PROPERTIES

- Appearance.....clear water white liquid
- Acid Value.....0.50 mg KOH/g max
- Hydroxyl Value.....33.0-42.0 mg KOH/g
- Moisture.....0.75% max
